Good idea, Dana. Does the boilerplate language work, Phil?

Might make sense to utilize the boiler plate from the registration review IDs/PIDs –

FIFRA, as amended by the Food Quality Protection Act (FQPA) of 1996, mandated the continuous review of existing pesticides. All pesticides distributed or sold in the United States generally must be registered by the EPA based on scientific data showing that they will not cause unreasonable risks to human health or to the environment when used as directed on product labeling. The registration review program is intended to make sure that, as the ability to assess and reduce risk evolves and as policies and practices change, all registered pesticides continue to meet the statutory standard of no unreasonable adverse effects. Changes in science, public policy, and pesticide use practices will occur over time. Through the registration review program, the Agency periodically re-evaluates pesticides to make sure that as these changes occur, products in the marketplace can continue to be used safely. Information on this program is provided as www.epa.gov/oppsrrd1/registration_review/.

In 2006, the Agency implemented the registration review program pursuant to FIFRA section 3(g) and will review each registered pesticide every 15 years to determine whether it continues to meet the FIFRA standard for registration.

All,

Thank you again for your review and edits. I was going through Anita comments on project description for malathion to incorporate with the edits you all provided. Her comments are general and apply across all three chemicals. One of her comments request PRD provide some language describing the reg review process (see comment on page 5). Can one of you get provide that language? Also, Steve can you confirm that the number of registrants for malathion (see comment on page 19)?

Hey Steve and Dana,

Would you be able to review the projection descriptions (part of Biological Opinions) from FWS for your respective chemicals over the next week?

I could look at diazinon tomorrow. But Steve and Dana will have to look at malathion and chlorpyrifos—I am not familiar with those cases.
